An AWESOME Start., Jan 28th, 2006

Reviewed By: sottey

This is a great first pass at making a GPL del.icio.us clone. It's got rss, it's got tag based storage, it's got javascript bookmarklets for adding bookmarks. Awesome. I call it a good start because there are some things that are a bit rough, which hopefully will be resolved in the next release. The install, while straightforward, is all in spanish. The RSS and tagging are difficult and there;s almost no support in English. Still great though. I LOVE it!
