Sticky Button

Hits: 3,147

Description: This flash file contains animated buttons which has been created with the help of action script. The buttons behave like magnets. When you haver on the buttons they start to follow the mouse, like an iron would follow a magnet. While following the mouse, if the button has been moved from its original position long distance, at once the buttons gets back to its original position, just like the magnet has lost its power on the iron. But, button doesn't simple go back, after it has reached the original position it dances, behaving the way like it sits on a spiral. The behaviour of these buttons is fully customizable. And this control is fully free of charge.

Resource Specifications
