MultiCMS MAMBO, Multi-user MAMBO

Hits: 1,659

Description: MultiCMS: MAMBO allows you to start a Mambo host similar to the many forum (and now) PHP-Nuke hosts. It works of a single set of files and a single database, and allows thousands of sites to be hosted off a shared account. Adding new modules and Mambots is easy through the fully flexible admin panel, and some of the most popular come preinstalled. Users can be given subdomains, and header and footer ads are ran on any users site (set by the admin)

Themes and languages can be added at will for your users. To make security tighter, the mambo core files have been severely edited to disable any end user access to the database, and give them full control over any aspect of THEIR site (and not others).

Start offering your users a fully rigged CMS today!

Resource Specifications

Version:	1.0
