Clean site, but ..., Jan 5th, 2006

Reviewed By: kanjimaster

phpbee is a site offering (at the time of writing) not the hundreds of scripts claimed, but instead just 20 including the one line `phpinfo()` script and the only slightly longer 'Hello World' classic.

On the plus side, the site is mercifully free of advertising clutter and all the examples are clearly scripted and well-documented, which might be helpful for PHP virgins.

On the negative side, there's nothing original here that you couldn't find in any basic book for beginners.
