A.W.P.S. Site Security System

Hits: 1,690

Description: AWPS is a Website Project System for Web sites that do not want to link directly to thier .php or .html files. Some have asked, "Why make such a program?" Why? Copyrights are just no help any more. Why you ask? Because Copyrights rely on the morals of the user. There is no active protection on you web site files. Just a document that says that IF someone steals your files and IF you find them, they can be sued by you. What protection is that? Why else. Because of all the internet piracy going on. Nothing is safe any more. The only way to full protect your source files is to not make them readily available to the public. But how do you do that and still have a site that dosent cost hundreds or thousands? The answer is A.W.P.S.. A.W.P.S. will simplify your web site, simplify, and secure it as well. You still create all the files as in a normal site, then A.W.P.S. directly loads them from an inaccessible folder inside your web site. This program is the best of its kind. Check it out today.

Resource Specifications

Version:	0.7.2.0
Platform(s):	linux, windows, freebsd, sun
Date Added:	Jan 15th, 2006
Last Updated:	Feb 5th, 2006
