# Search Engine Friendly Flash Menus by f-source.com Hits: 3,257

**Description:** Flash menu can be Search Engine Friendly! The main disadvantage of flash navigation is now eliminated! We've developed a way to combine HTML links with a flash menu. The menus have navigation settings in the form of ordinary HTML links, which search engines like, but your visitors will see only impressive flash animation. Flash menu file by means of special technology reads HTML navigation settings and, on the basis of these links, dynamically creates the great-looking flash navigation you see. We provide menus as Dreamweaver extensions. You don't need flash or any flash experience. Only minimal knowledge of Dreamweaver is needed. Professional menu design. Dynamically generated by Flash Action Script. Don't waste your time with tangled menu builders. Use optimized, top-level, ready-to-use menus. Horizontal flash menu bar, drop down menu or tabbed navigation. Each flash menu is tested and approved by Adobe Quality Assurance team and listed in Macromedia/Adobe Exchange section.

## Resource Specifications
