# phpGoogleStoreLocator

Hits: 8,905

**Description:** PHP Google Store Locator is a PHP/MySQL application that allows people to find stores that are close to their zipcode or address. It can be used for things other than just finding stores such as showing where all your mansions are and how to get to them, where all your meetings are held, offices, and whatever else you can think of.

It currently supports Address and Zipcode search for the UK, US, and Canada. It also has Address searching available for US, Canada, UK, Australia, New Zealand ALL of Europe (including the UK and surrounding territories), Taiwan, Singapore, Hong Kong, India, and Brazil. For the rest of the planet, it can geocode up to the City level.

## Resource Specifications
