Encrypt HTML Pro

Hits: 2,026

Description: Encrypt HTML Pro is an application to encrypt HTML files and protect your web pages from unauthorized copy. It can prevent others from viewing and reusing your web page source code, including HTML source code, JavaScript, VBScript, external JavaScript js files, css files, text, links and graphics, thus protect your hard work and unique design on the web. In addition to encrypt HTML source code and make it impossible for people to read, Encrypt HTML Pro also takes some additional measures to further protect your web page, such as disable right mouse click, disable link display in status bar, disable text selection, disable off-line use, disable page printing, disable IE6 image toolbar and smart tags, add referrer URL check, etc. The encrypted page will have the same appearance as the original one.

Resource Specifications
