Nevron Diagram for .NET

Hits: 955

Description: Nevron Diagram for .NET is a fully managed, extensible and powerful diagramming framework, which can help you create feature rich diagramming solutions in WinForms and WebForms. The product has full AJAX support for WebForms and is built on top of the Nevron Presentation Framework thus providing you with advanced capabilities for stunning visual impact, which you will not find in any other product - including commercial standalone diagramming applications. The product also lays on top of the the Nevron Document Object Model (DOM), which ensures the consistency of its object model and design.

Nevron Diagram for .NET has been carefully designed to meet a vast amount of customization requests. It has an excellent object model and its API has been thoroughly refined to be as native and intuitive as possible. The product itself exploits a large set of modern design patterns, which ensures its scalability.
