Anti Spam

Hits: 2,383

Description: The purpose of this page is to make it so that spammers who attempt to collect email addresses off the web through programs will not have real email addresses in their database, causing them lots of trouble because they will have to clean out their list. This page has one thousand randomly generated names and email addresses (refresh and new ones will appear). At the bottom of the page is a invisible link to this page again, essentially reloading it for programs to collect more fake email addresses. Email collecting programs will be sent in an infinite loop by following the link at the bottom of the page and will get more and more fake email addresses stuck in their databases. This helps to place many invalid email addresses that won't help spammers (they will get more returned email ;) and is our effort to FIGHT SPAM.

Resource Specifications
