# SODA Administration and Security

Hits: 3,317

**Description:** Allows you to create users and assign them to user groups, setting security for specific users and/or user groups, and based on this security grant or deny access to your own applications into which SAS is easily integrated. Set up the maintenance (add/modify/delete) of your own tables and grant access to these maintenance programs using the security system. Create your own security and maintenance modules and instantly have them password protected by SODA Admin and Security. Create functions and immediately be able to set user and group security on them which can be called by your own applications to change the behavior of your system. Version 2.1 seamlessly integrates Kevin Roth's WYSIWYG rich text editor which can be used to maintain your data. Includes pre-loaded tables for countries, states, provinces, time zones, languages, fonts and colors.

What absolute Rubbish I downloaded this product set up MYSQL database, installed it and was Told I needed a 100 digit key from <http://www.cananoa.com> When I got to the site for the FREE key Either the Key doesnt exist or the have pulled the Plug on this Product. Absolute waste of time.. I have to give it a score of ( 1 ) if the zero option was available i would give it that STAY CLEAR OF THIS SO CALLED PRODUCT.

**Installation went well!**, Apr 4th, 2006

Reviewed By: Karen Lile

I have now installed the Soda Security program following the instructions in the 18 page document. I did have to check with my server administrator to see what to put in place of local host, but once I did, I was able to install it with no problem. The installation went exactly as the literature described. I will keep you all posted on how it works in operation. So far, nothing has blown up and no negative impact on my other programs.
