# AdvancedTrivia

Hits: 983

**Description:** Trivia is an advanced trivia script and highly customizable. We went one step further and worked a little bit harder to make this script one step better. It generates a random question and of course lists choices - but it lists them in random placement so the user can't just pick the right one every single time. It uses a flatfile DB which is very easy to edit. Exploitation of the ability to use templates has occurred to bring to you a script that will fit your site better than any other.
