Map-IP Free Geo Location Software

Hits: 3,677

Description: Map-IP plots the browsers location using Geo Location Databases. It finds the latitude and longitude coordinates of the IP address and plots it on a map of the world.

Map-IP is very easy to set up on your server and has a very small footprint, the full down load is only 60k. The only server requirement is PHP and optionally the GD library.

Version 1.1 has fixes for Opera, a rewritten translation system, a partial Italian translation, the ability to manually change from CSS and GD mode in the preferences, UI improvements, and many bugfixes.

Resource Specifications

Version:	1.1
Platform(s):	linux, windows, freebsd, osx, sun
