PERLParser

Hits: 579

Description: PerlParser is an ONLINE Perl Interpreter. It uses ALL templates allowing 100% customization to the webmaster.

To actually use the script you need to edit the perlparser.pl file and edit the specified variables. They are few in number and not hard at all to figure out. After you've done that, put the correct file permissions on the files and then create a link to <http://www.yourdomain.com /path/to/perlparser.pl>. The script automatically figures out what to do when it is executed. The MAIN HTML file is main.html, which contains the actual programming box. All templates are stored in the subdirectory, /templates. Alter until it fits exactly as you want it to. Then just paste your perl code into the box and hit the submit button to parse and show output. Have fun!

Resource Specifications
