uAlbum

Hits: 16,573

Description: uAlbum is one file web gallery based on PHP and JavaScript scripting. The main idea was create really simple online gallery for situations when you need public some photos in short time and you will not create some galleries, subgalleries, set permissions etc. There is only one installation step if you want use uAlbum - copy images and uAlbum script file into same directory.

Simple and efficient, Mar 8th, 2006

Reviewed By: MrZaphodB

I've been looking for such a script for a long time. It is simple and efficient, easy to use, easy to install. If you do not want to run big gallery scripts whit users, comments etc. but just want to make it easy for your visitors to watch pictures, this is the right choice.

It has even a java powered slideshow which works in all browsers.

You will need ftp acces though to upload new galleries.

Also, few more simple features will be welcome.
