Perfect for what I wanted - bookmarks publicly available but you need a password to edit them. Setup was wonderfully easy - "Fill in the sql and URL info in config.php and upload everything. Import this file into the database. That's it!" :-)  
Does what it says very well, and does nothing else. Beautifully simple. Only gripe is inability to edit the category titles - you have to create a new one and move the links to it.

Warning for setup: Don't put it in your cgi-bin directory, it won't work!
