Amazon Script PageManager

Hits: 2,498

Description: The AffiliateSide script has been improved to offer products from amazon.com (USA), amazon.ca (Canada), and amazon.co.uk (United Kingdom). Another script fix includes category-specific as well as blended product results for each page of your website. With AffiliateSide PageManager Service, you are able to easily manage your amazon affiliate links. Areas are provided to create and manage color-schemes and styles that match your site as well as a keyword testing center which saves you time choosing products to add to your site. Real-time statistics monitor hit impressions giving you an overview on traffic through various pages of your website. This script is one line of basic HTML code which is simply configured and placed into your existing website. The software will request up to 10 search results from your keyword(s) and display them on your website including your associateID to receive commissions. Once placed on your site, the script will automatically include all new products.
