Feedback Form with a Cookie

Hits: 3,352

Description: This tutorial teaches you how to process a simple feedback form. It records the date and time that the user logged into the system and saves this information, in addition to the user's name and email address, in several cookies. Upon subsequent logins, the code checks whether the user is a new or repeat user and displays information accordingly.

Resource Specifications

Price:	Free
Date Added:	Jun 19th, 2000
