PHP Excel Pro

Hits: 2,195

Description: PHP Excel Pro is an application (with lots of examples), on writing to an excel file, without the use of COM objects. Supporting all basic values for cells such as numbers and strings, PHP Excel Pro also supports images, formulas and url links. With the ability to create multi worksheets, hidden attributes, password protection, portrait, landscape, text alignments, default column width / spacing and many many more features, PHP Excel Pro is the ideal tool for direct web-to-excel documentation.
