AlpMcalc

Hits: 1,400

Description: AlpMcalc is a 'NO number' calculator. It uses A-J alpha matrixes to compute my own coded math methods and it does it without using numbers or any Math functions built into JavaScript. The only numbers used are for indexing and comparison. The matrix components and index references does it all. After you click = the interface turns the numbers into letters a-j, computes, and then converts back to numbers to present solution. Only your CPU and memory limit the length of integers. It has a full interactive interface using CSS, DHTML, and JS. A number of bug fixes and enhancements added over the last several months.
