TalkShop

Hits: 6,135

Description: TalkShop is a collection of Perl scripts and HTML templates that allow you to run a highly customizable webforum on your website. Through TalkShop, visitors can post new messages, read messages, and respond to messages from other visitors, all via their browser. Messages are displayed in an easy to read threaded format by default, but visitors can also select to view the messages in chronological order, or view a summary of all the active threads in the forum. Features include: Automatic Message Board Maintenance, Multiple Board Control, Multiple Administrator/Moderators, Multiple Views, Nickname Protection, Response Notification, Search Function, Subscription Service, "Guestbook" Mode, and many more.
