iPad

Hits: 4,348

Description: iPad is a shoutbox for any website. It doesn't require sql in any form, using flatfile for storage. This script is not quite a guestbook, it sits on your frontpage and allows people to leave comments. It's called a shoutbox!

Instructions:

Open the .php file in notepad.

Change the variables in the comment in the .php file.

The \$os variable needs to be WINDOWS or UNIX

Upload all of the files from the zip.

Change the permissions on this file and pad to allow anyone to modify/execute/read. Google if you need help. This is based on a previous piece of code, and is open or anyone to mess with.

Resource Specifications

Version:	1.0alpha
Platform(s):	linux, windows, freebsd, sun
