Metadataminer Catalogue PRO - extract metadata to XML Hits: 1,741

Description: Interactive Metadata extraction from documents and files providing capability to download file properties from documents, IPTC from jpg, tif images into an XML format in addition to easy HTML reports cataloging folders. Command line mode offers information retrieval automation for collection of file properties with application of XSLT : conversion into a csv PDF or html format delivered with the program or your own XSL for custom uses via batch.

MetadataMiner lets you rapidly create an HTML index of entire folders with extra file information and hypertext links : you can share documentation catalog in a project team and save time searching for data. Options to suppress CR+LF from properties fields in HTML and XML exports. Option to include filename in the title fields property during folder mass update of Office file properties. May be useful for forensic purposes. XML metadata export helps on migration tasks in particular for digital libraries management projects.
