ES File Upload & Download Manager

Hits: 35,958

Description: ES File Upload & Download Manager v2.5 is a PHP based file/download/upload management system created for webmasters to allow members, users and guests to download/upload files from your website with ease. You may specify the location for uploading files (disk or database) and accept files depending on their size and extensions. File sizes and record dates displayed in search results. ESudManager features an extensive administration back end with great tools such as user management, file management, download/upload approval, login history, download/upload history plus more. As well as its administration panel, ESudManager has a great front end which is extremely easy to customize to your liking... Within minutes you could have yourself a professional, fast, and secure download/upload manager. It is easy to set up for a beginner, but still easy to customize for the more experienced user.
