Simple but Highly Effective Box Animation

Hits: 1,596

Description: You have 2 or more boxes (circles, triangles, whatever). The middle of one is colored, you click on a different box and the middle color slides to the box you clicked with a cool sliding effect (a faded trail). This effect is highly re-usable and easy to implement with different shapes and several of them. Source code included! Concepts: actionscript animation, button press.
