## aim profile link tracker : AimStats

Hits: 3,523

**Description:** You don't have to use those cheesy AIM tracker sites anymore. Brand new very easy automated install, all you need is your mysql connection info! It tracks the usual stats ( total clicks, browser+usage percentages, os+usage percentages, date/time, ranking, last visitor) for each user along with a feature called "taglines". When a user clicks on the link "X" amount of times, a form will appear and lets them create their own special message (no html tags allowed) for others to see. Install process creates a great looking site by default to show off your profile stats. CSS is customizable. Script can be easily added to your current webpage. AimStats has the ability to alert you of new user clicks and/or abuse attempts via email notification. This release contains many new features that are listed on the web page but the major features include: Redesigned admin options now handled by Admin Panel with a l/p,new security checks, and ban ips. A working Demo is on the site. Enjoy :)
