Unsniff Network Analyzer

Hits: 735

Description: Unsniff is a hot new scriptable and extensible network protocol analyzer. Now you have the power to write your own network analysis scripts in VBScript or Ruby. Unsniff features fresh new views of protocol data, advanced PDU + full stream analysis, network statistics, powerful filter wizards, and much more. Across all layers, it presents a more organized and deeper view of what is happening in your network. Whether you are a protocol implementer, student, designer, administrator, or a security expert - Unsniff will change the way you look deep inside your network. It contains a lot of features that are firsts in the network analysis world - including the Visual Breakout view of a packet, PDU+Stream analysis, and more. You can break free from canned reports and charts using the powerful Scripting API. You can add new protocols using a comprehensive XML specification or via C++.
