pictelo

Hits: 10,389

Description: pictelo is a very basic photo album script (support jpegs, gifs and PNGs), it's not designed to be a full-featured gallery package, but rather a quick and easy way to index a directory full of images. It lets you give your images friendly names, and automatically creates thumbnails of them, it also gives each of your images a hit counter, all with nothing more than PHP and GDLib. A demo is available on the site.

It is clean, simple, and worked like the instructions said it would. I would recommend this for anyone looking for a quick, easy script for displaying photos.
