## Mega File Hosting Script v1.2

Hits: 24,402

**Description:** Mega File Hosting Script(MFHS) is an advanced File Hosting and Sharing Script that allows your customers to upload large files to your server and email the file download link to themselves and other email recipients. With MFHS, you can setup an advanced file hosting and sharing site within minutes and earn profits through showing advertisements on your site, and even on download pages. MFHS was Built to Handle Large files and is designed to be of minimal burden on your server. MFHS has been rigorously tested and designed to handle brutal file sizes and endure lengthy uploading periods without breaking. This alone sets MFHS world's apart from any competing script. MFHS provides a number of unique features,including Multi Server Balancing, and an Advanced Download Manager. MFHS comes E-Commerce Ready with PayPal Integration and plenty of tools such as FAQs & Newsletter Managers to get new customers - and keep them. MFHS has been oriented towards Generating Revenue for it's webmasters.

### **Poor Software and Support**, Jun 22nd, 2007

Reviewed By: gtmel85

I have experienced a poor software designed with so many bugs. They have a very poor support. And the worst part is: They won't give refund.! Do not buy software from this vendor.

### **WORST SERVICE EVER. I NEED MY REFUND BACK**, Jul 8th, 2007

Reviewed By: kfaiz78

I Found this software on hotscript thinking it good. It full of bug. I was money getting it installed. I email the support no response. I email them about 8 time and it been over 1 week now. I will not waste my money on this company

### **Decent software, bad support**, Feb 5th, 2008

Reviewed By: mattk

I used the trial edition of this software and was reasonably impressed. I decided not to purchase in the end because my emails to their support address were only selectively answered. If they can't respond to a potential customer you can bet they won't respond once they already have your money. Pity...

### **Excellent Script if you Know How to Install**, Feb 9th, 2008

Reviewed By: dappadizzle

This script has everything a future file hosting buisness needs, simple front end and backend script. It has a few bugs here and there but nothing to get upset over. I have used this script for almost a year now and I have found that many of the customers problems are their own when uploading the script and installing. Please ask for help before installing so you do not get frustrated, my name is DappaDizzle on the support forums and I always help out. GREAT SCRIPT YAB! CANT WAIT FOR MFHS v1.3!!

### **Way too many Problems!**, May 9th, 2008

Reviewed By: mikedang72

This script requires that you have to link the license to his server for it to be activated. Which means there no way of ever cutting the umbilical cord. Secondly, if you can't get to your server via LINUX, then you can change a file that times out for large files. Even a 1MB will time out. I paid approx \$80 for the script and if I would have known, I would not have even taken the script for free! The support is horrible. You have to wait about 12 hrs to get a response. Forget this script!!!
