# Right HTML Protector

Hits: 544

**Description:** Protect web pages from unauthorized text, photos, graphic and e-mails extracting, saving original appearance. Encrypted HTML and source code blocks web site rippers and email extractors used to collect spamming email bases. It features six encryption methods that allows include or exclude some parts of web pages from encryption - for example, you can only protect e-mails and images. This helps your web site to maintain high search engine ranking.
