SMK PHP Authentication Class

Hits: 3,712

Description: his package can be used to authenticate users against a MySQL database of user records.

It can verify whether there is a record for an active user given the user name and password. If the authentication succeeds, it creates a record for a new session in another database table.

The new session identifier is set to a session cookie. This cookie can be verified in subsequent accesses to determine whether the user was previously authenticated and the session did not expire.

This package can be used to authenticate users against a MySQL database of user records.

It can verify whether there is a record for an active user given the user name and password. If the authentication succeeds, it creates a record for a new session in another database table.

The new session identifier is set to a session cookie. This cookie can be verified in subsequent accesses to determine whether the user was previously authenticated and the session did not expire.

Resource Specifications

Version:	1.0.1
Platform(s):	linux, windows, freebsd, osx, sun
Date Added:	May 14th, 2006
Last Updated:	May 14th, 2006
Author:	Andrei
