Silentum PasswordGen

Hits: 2,221

Description: Silentum PasswordGen is an excellent password generator tool if you need passwords for email clients, message boards, IM programs, or any other protected pages. It has various options, including choosing whether to use lowercase/uppercase letters, numbers, symbols, and spaces, in any combination you desire. Its character limits extend between 5 and 50, and you can generate 1 to 5 passwords at a time. You can use this for your own personal use, or place it on your site to allow visitors to generate their own passwords. It runs entirely on a single PHP file, and doesn't require any MySQL.

Resource Specifications

Does what it does just fine!, May 16th, 2006

This is a simple page by default but it does exactly what is promised. You can generate a password with the parameters you want automatically. I use it unlinked for my own use but it would be easy to style it and use it in a public manner, say as a link from a registration page to help visitors choose good passwords. Rated "5" on the chile pepper scale.
