## ConSense, RedSand, SimpleClasses

Hits: 1,778

**Description:** ConSense, RedSand and SimpleClasses exist to ease your life as a web engineer. Performing heavy-duty tasks with them is a snap. No matter if your job is to build a "web 2.0" site or make the transition of your code developed in Firefox to IE, each of them takes only a few minutes.

RedSand and SimpleClasses form a sound, dynamic, object oriented, ever growing JavaScript/DHTML framework covering all aspects of client-side web development.

ConSense itself is a sophisticated "jack of all trades" console, capable and versatile. It gives you insight into anything in connection with your web application on the client-side, right to the smallest detail. With its help finding browser incompatibilities, tracking down style element inheritance errors, all-encompassing DOM inspection and mapping, detailed debugging and logging, on-the-fly file loading or asynchronous communication with web services become less than routine.

### Resource Specifications

<b>Platform(s):</b>	linux, windows, freebsd, osx, sun
<b>Date Added:</b>	May 22nd, 2006
<b>Last Updated:</b>	May 22nd, 2006
<b>Author:</b>	Balazs Toth
