I looked for such a script for 3 days non stop. none worked or didn't suited my simple needs for a link exchange manager.

This script is just perfect. Works great. I admit I was confused since they said that links directory should be CHMOD to 777, it didn't worked for me until I reset it to 755.

Now works like a dream. Is completely search engine friendly, super fast and error free.

Does not support subcategories but I don't want a whole directory here so that's just great.
