# JAB Directory Displayer

Hits: 4,090

**Description:** JAB Directory Displayer is a free script written in PHP, it allows people to access a file and folder displayer which is accessed through a single password.

You can choose a top level directory and it will allow the user to view files and folders below that directory. You can choose whether to make files clickable or not. Folders are always clickable.

Instructions are included in the download. Created By James Barnsley (www.poundingbeats.com)

Awesome Script.

1 change needed though! When clicking to download the form it was pointing to the root directory. For example, i had a form at root/forms/form.doc the script always tries to download from root/form.doc To fix this i made a change on line 136.

Changed:

```
$output .= "<td><a href=\"" . $directory . "/" . $file . "\">
```

to:

```
$output .= "<td><a href=\"" . $dirname . "/" . $file . "\">
```

Thanks again.

**Works Great!**, Feb 27th, 2007

Author is fantastic, helped me out, and the script is fast and does exactly what I need. My folders look so good, before they were just showing the raw web folder which looked terrible, this is all dynamic so I don't have to update a page to keep all my pdf files organized on the web. Great!
