paxScript.NET

Hits: 590

Description: paxScript.NET is an embeddable interpreter of C# and VB.NET languages. The key features of paxScript.NET are: you can embed paxScript.NET into your WinForms or ASP.NET application so you can customize and extend the application without having to recompile it; any host-defined types can be used in scripts; it compiles programs into byte-code; it does not use CodeDOM and it does not generate dynamic assemblies; you can save/load compiled scripts to/from a stream; paxScript.NET supports Microsoft .NET Compact Framework.

Resource Specifications	
Version:	2.0.1
