MageBB

Hits: 1,666

Description: MageBB is a brand new bulletin board system from Mage Software. It has a very easy to use and good looking both front and back end functions. It features a full logging system, a feature that most new, commercial bulletin boards don't have. Each of the logs are stored from Admin Logs, to Member Logs, each contain important information, Username, Time, Action, and they cannot be deleted from the system (In order to stop "bad" admins from causing havoc), of course MySQL Query deletion is possible. Instead of hunting around for modifications, the default package brings them to you, from the shoutbox to extensive logs. You may also request modifications at our support boards, and they should be integrated with the next release if popular. Whilst still in development, MageBB is nearing release very fast, and all features are working as of today's release.

Resource Specifications

Version:	1.0
Platform(s):	linux, windows, freebsd, osx, sun
Date Added:	Jun 17th, 2006
