Espresso Framework

Hits: 6,806

Description: Espresso is the most popular, powerful, enterprise-strength J2EE architectural framework. Espresso extends Struts for developing database-driven web applications and builds on many other open source projects. Espresso is designed to shorten time-to-delivery of Web-based applications by providing a library of extensible Java Server components for providing services to web-based applications so the developer can concentrate on application logic. Espresso has capabilities for security, robust object-relational mapping, background job handling and scheduling, self-tests, logging integration, automated table manipulation, database connection pooling, email connectivity, event notification, error handling, caching, internationalization, XML automation, testing, registration objects, configuration management, workflow, automatic database maintenance and JSP tag library etc.

Resource Specifications

Version:	5.6
Platform(s):	linux, windows, freebsd, osx, sun
Price:	Free (Apache style)
Date Added:	Jun 30th, 2000
Last Updated:	Jan 27th, 2005
Author:	Jcorporate Ltd.
