## Directory Redirector

Hits: 3,431

**Description:** This script redirects users from your site or ip like e.g: <http://gimescripts.com/dir> to like: <http://ebay.com/blah/blah/blah.php>. It works with a .htaccess file so it doesn't actually create the files each time, but you can just delete the .htaccess file, if you want, and it will delete all the redirectors. The mysql database only stores the info of users who created any redirectors and the url's. Dont worry about them redirecting "your" index files because the script checks the mysql database and all of your files!

Script all built you just need to setup your mysql settings and include your stuff. Nothing required for this script except apache, mysql, and php.

### Resource Specifications
