APNSoft TreeView 1.0

Hits: 1,056

Description: APNSoft TreeView is an ASP.NET server control to display hierarchical data in a tree structure. The main advantage over other TreeView controls is the SIMPLICITY. You do not need to learn a complex API to accomplish a task; create professional looking treeviews with only a few lines of code. Despite of this, our ASP.NET TreeView is a flexible, reliable and powerful product. It is a perfect tool for web developers. APNSoft TreeView has been designed so that it integrates into the look and feel of any web site. Layout can be controlled by the CSS style and user-defined images. The product uses XML for defining TreeView structure since XML is the most convenient format for structured data. The generated DHTML code is compact and fast. It is compatible with all popular browsers. The main benefit is that the FREE version allows up to two levels of hierarchy.
