Anywhere Together Software Ltd

Hits: 10,854

Description: Files Together is a web based file manager that runs on Apache/IIS or any web server that supports php on any OS (windows/Linux etc). You can use our web based file manager to create web file sharing solutions for your organisation. Users can access files from any modern browser. The desktop version for IE/Opera/FF uses ajax so the application has the feel of a desktop application. It doesn't end there though...you can access your web based file manager from your PDA or phone device using Files Together Mobile Edition. You can also read word and text documents from your PDA/Phone. No other web based file manager allows you this much access.

There is no limitation on what types of digital file media you can use including, word and excel documents, images, audio, video, publishing layouts, presentations and PDF files.

Installation of our web based file manager is easy with our advanced installer that copies the files to your server and then starts the easy web installation.

Resource Specifications

Version:	1.7.0.0
