JExifViewer

Hits: 1,971

Description: JExifViewer is a Java program for displaying and comparing Exif informations stored in JPEG files created by digital cameras. JExifViewer is an Open Source project released under the GPL.

JExifViewer has an image viewer in which you can rotate and/or flip, zoom in/out the selected image. You can also print an image.

You can also rename, copy, move and delete images.

At the moment JExifViewer is localized in English and German.

A short online help is available.
