clonefish - PHP form generator class

Hits: 1,739

Description: A proven and mature PHP class aimed to aid the creation of professional self-validating input forms. - easy configuration using a simple PHP array - client-side + server-side form validation (cross-browser JavaScript and PHP)

- automatic form generation with customizable layouts (no need to type HTML)
 - static and dynamic form input elements. Values for dynamic elements are retrieved from database queries (out-of-the-box support for AdoDB, Pear DB, native MySQL and very easy to extend)
 - some very handy special element types (FCKEditor support, file selector and much more!)
 - valid XHTML output, accessibility features
 - templating support (eg. Smarty) by exporting the form elements to an array
 - multilanguage support for outputting error messages or other information - entirely Unicode compatible
- ...and much more! A `_useful_`, non-expiring free version is also available!

Resource Specifications
