@1 File Store PRO

Hits: 3,490

Description: File archive + Member access system with multi-level folders. Users are differently grouped. Different groups have different access permission to different folders. A complete revision with more powerful features such as file zipping, file moving, file copying and automatic/manual approval of new signups. "Pending" shows all the files uploaded by Users and awaiting approval from Admins or Sub-Admins. Users can/cannot delete their own files. You may keep multiple files of the SAME file name in the same folder without renaming and without overwriting the old files. You CANNOT even do this in Linux and Windows OS !

This file archive system is awesome!, Jul 8th, 2006

Reviewed By: SuperBaby

I used this PHP script when it was first released. Now it is in its version 2.0. Many features have been added. It is even more powerful now. This is a complete file archive and membership authentication system and it is very flexible. The greatest new features are the file-copying and file-moving features. You can upload multiple files with the same filename to the same folder without having to rename them. This is useful for uploading monthly reports with the same titles (but different dates).

Superb file archive system., Jul 10th, 2006

Reviewed By: mayonpee

The author has really put a lot of effort in creating a flexible yet powerful user authentication method into an already superb file archive system. Not only you can divide users into different groups, you can also have two types of admin accesses, namely Admin and Subadmin. The PENDING approval feature for uploaded files also deserves another merit point. The newly added file copy and file moving features are wonderful. You can copy and move files between folders of different levels.
