# PHP Web Statistik

Hits: 11,783

**Description:** The PHP Web Statistik offers a easy configurable php webtraffic analyze script with many module based stats. No database connectivity is required. The following stat modules are available: year,month,day,weekday,hour,referrer,browser,operating system,last visitors,provider,country ,hits,page impressions,search engines,search phrases,visitors of the last x days,colordepth,resolution and trends. The log function works with javascript,image tags or native php.  
the new version 3.5 has extra features: file-cache to enhance performance,analyze time intervals,cookie handling,better performance,reviewed code,password protection and frame-support

This script allows users to monitor every aspect of their visitors hardware configuration, which is very usefull if you want to optimize your web pages for certain browsers or screen resolutions (10% still uses 800x600 on their monitors). It also allows you to set a cookie such that own visits are not included (click the red light bulb). Very nice feature! I enjoy this script more than anything, and recommend it deeply. It is fairly easy to install, just edit a few variables in the config file.

**Perfect and easy**, May 12th, 2008
