File System Wrapper

Hits: 1,459

Description: The file system layer is used to provide a 2 way method of manipulating the File system. One is using the standard File System calls and the other is by using the FTP wrapper provided. The advantage of using such a Layer are stated below -

- * No Safe mode access problems
- * No CHMOD issues
- * Remote file access
- * Files are easily writable
- * System independent File read and writes
