# EasyCommunicator

Hits: 1,368

**Description:** EasyCommunicator uses either JavaScript with DOM (AJAX) or JavaScript and a Flash object for the purpose of communicating with a web server without refreshing a page. The goal of EasyCommunicator is to establish a simple tool for eliminating the round-trip problem in web-based applications. Communication is accomplished with just 5 methods - setRequestPage, setVariable, send, load, and Get. No XML parsing is necessary. Includes server-side code for PHP, ASP.NET and JSP/Java.

## Resource Specifications

<b>Version:</b>	1.1
<b>Platform(s):</b>	linux, windows, freebsd, osx, sun
<b>Date Added:</b>	Jul 15th, 2006
<b>Last Updated:</b>	Jul 19th, 2006
<b>Author:</b>	Peter Tracey
