# SimpleJax

Hits: 1,012

**Description:** SimpleJax is a lightweight (2.3KB!) combination of JavaScript and PHP that allows you to create highly flexible, AJAX-enabled applications on the web with only five short lines of code.

There are plenty of "frameworks" floating around the web right now that can help you create AJAX interactions on the web, but in our experience, most are a little too bulky, complex, and are really just more than what we need.

If you're interested in getting in on the AJAX craze, but don't feel like putting up with the hassle or learning curve of some of the more complex AJAX frameworks, SimpleJax is for you.

## Resource Specifications

<b>Version:</b>	2.0
<b>Platform(s):</b>	linux, windows, freebsd, osx, sun
<b>Date Added:</b>	Jul 17th, 2006
<b>Last Updated:</b>	Aug 10th, 2006
<b>Author:</b>	MediaJolt
