KCallback.net

Hits: 1,516

Description: KCallback.net Control, the most powerful, robust, callback control available in the market today for ASP.NET with AJAX support. Written in 100% managed C# code, KCallback.net provide callback functionality in your web applications. The KCallback.net control allows developers to AJAX-enable any ASP.NET application with writing a few lines of code. It allows to update page content without postback and loss of scroll position

Here is the list of general features of KCallback.net:

- AJAX
- Save State
- Callback Result
- Callback Error
- Override Output
- Loading Display
- Enable Caching
- MultiArgument
- Auto Callback
- User Control
- Down Level Browser Support
- Client-Side API
- Server-Side API
- Before and After execute client side event handler
- XHTML Compliance

Good Product, Oct 9th, 2006

Reviewed By: Vikram Gupta

Efficiently and Quickly updation of required part of Page to the Internet without lost of scroll position. It uses AJAX which itself good. It can be used for both asp.net controls and third party controls. Even we can save state before callback. It's easy to use and performance is good.

Great Callback Control, Nov 23rd, 2006

Reviewed By: vijay_mehra

I have used many callback components, but I have to admit that none of them have matched my expectations other than KCallback.net by DimpleSoftwares. So far I have not experience any faults or errors. I can also customize the control to my needs since its manageble in C#. Having an the control AJAX-based is in my opinion, one of the strongest strenght. So for all developers who need to use callback functionality, I would like to recommend KCallback.net by DimpleSoftwares
