Silentum Guestbook

Hits: 18,005

Description: Tired of automated bots posting spam in your guestbook and want to put a stop to it? This is what you need. Silentum Guestbook is an easy-to-set-up guestbook system that uses a text file to hold the entries, so no MySQL is required. It can be up and running in a matter of minutes and integrated easily into any page. There are an abundance of spam-related words which, when detected, prevent the entry from being added. There is also a required 5 character verification image that needs to be repeated before posting to throw off almost all bots. If those prevention methods aren't enough, there's also a hidden checkbox field which, if checked, will stop the entry from going through. Since most bots complete every input field, they won't stand a chance. Five smiley images are included to add some eye candy to the page. The guestbook allows for an unlimited number of entries, divided into pages of five entries each.

Resource Specifications

Works excellent, easy to install..., Feb 26th, 2007

Reviewed By: xrayvision

We chose this script because we needed something minimalist yet powerful with minimum features. With a style sheet link above the rest of the php/html in the 'guestbook.php' page the CSS was fast sorted to fit with the design of this already 'minimal-look' web page. (Roboboy comic strip qubetech.net). Only very basic PHP knowledge needed. The rest is up to the CSS design. Therefore I would recommend it to the 'designer' type programmer who might appreciate the easy install.
